

IWOXX ComTrace V.5.0 - Release Notes 25.02.2020 (ENGLISH)

INC/REQ/CHG	Priority	Problem/Solution
-------------	----------	------------------

New features and changes:

CHG13053101		Increase of the current max. possible baud rate from 115,200 Baud to 1,000,000 or user-specific baud rates.
REQ18121001		Since not all COM port adapters accept all settings, it is now possible to store several user-specific hardware profiles, which then supply the selection fields for the port settings accordingly!
CHG20022405		The statistics display now always shows the selected event values and, after the slash, the total events recorded so far.

Resolved issues:

INC20022501	[5] Medium	With REPLACE, the current event pointer is not reset to 0 after the start of recording in the statistics area.
INC20022403	[3] High	The number of characters received is displayed too low during recording. The value is correct in Examine mode.
INC20022402	[9] Low	During recording, sometimes artifact lines appear at the bottom, which are even filled with a count value, but characters never appear.
INC20022401	[2] Critical	The views were never displayed completely during recording of a high data volume.
INC19111801	[9] Low	Help page corrections and improvements including the new topics.
INC19111101	[3] High	With English as language setting the German help file was used!
